Hungarian Design Award

We strive to bring you excellent Hunique style products. We design our Hunique saddles and riding accessories using high material and design standards for the best custom fit combination for you and your horse.

For example, we use advanced technology to produce a lightweight yet sturdy Flexight saddle tree to support Hunique saddles. Each Flexight saddle tree contains a heat-resistant and structurally strong steel gullet plate, allowing a non-invasive and simple adjustment to match the exact angle of your horse's withers without disassembling the saddle. Flexight saddle trees are available with carbon-net, aramid/kevlar-net, or glass-net reinforcements.

Additionally, as of Spring 2012, we embed all Hunique saddles with Radio Frequency Identification (RFID) chips. The chip enables us to scan your saddle and instantly access all of its features, including construction elements, rider and horse measurements, service history and recommendations.

We know that only the highest quality materials can result in the superior products, and so we use only the best Italian and English leather, as well as stainless steel fittings and polyurethane construction. Hunique's reputation proves that we have the necessary experience and knowledge to construct durable, high-quality saddles and riding accessories, as well as the design sense to make you look great atop your horse!

We welcome feedback you have regarding any of our products, and look forward to building a positive and enduring relationship with you.
